PT. Bahari Lancar Abadi is a company engaged in the business of trading fishery products with the aim of exporting to various countries.

PT. Bahari Lancar Abadi was established in 2021, founded by Muchtar Fatcturrozi as the Board of Commissioners and Sarah Novi Andriani as the Director.

Export commodity PT. Bahari Lancar Abadi include the following; lobster, grouper fish, tuna, mackerel, layur fish, kurisi fish, shrimp and several other commodities. Lobster, grouper and tuna are superior commodities with quite a large percentage of shipments.

Marine products are obtained from various suppliers from all over Indonesia, carrier transportation means include; planes, ships and trucks.

# MAIN PRODUCT

PT. BAHARI LANCAR ABADI

# LIVE & FRESH GROUPER FISH

Grouper (*Epinephelus*) found in the waters of the islands of Asian. The number of species worldwide is 159, in Southeast Asia is 46 and 39 species can be found in Indonesia

# LIVE LOBSTER

Indonesia is the main habitat of Lobster (Panulirus sp) because it has a very large coral reef area, the total area of water reaches 6.32 million km<sup>2</sup> and a total coastline of 81,000 km

**PT. BAHARI LANCAR ABADI**

# FRESH TUNA LOIN & WHOLE

Indonesia's tuna (*Thunnus thynnus*) catch is the largest in the world at about one million tons per year or 16 percent of the world's total *tuna* supply.

A tuna is a saltwater fish that belongs to the tribe Thunnini, a subgrouping of the Scombridae family. The Thunnini comprise 15 species across five genera, the sizes of which vary greatly, ranging from the bullet tuna up to the Atlantic bluefin tuna, which averages 2 m and is believed to live up to 50 years

# FRESH SHRIMP

Indonesia's Shrimp (*panaeus spp*) is a crustacean, crustacean growth and reproduction is regulated by a combination of neuropeptide hormones, ecdysteroids (moulting hormones) and methyl farnesoeate isoprenoid (MF). Growth in shrimp is the addition of protoplasm and continuous cell division at the time of molting.

# FRESH SNAPPER FISH

*Indonesia's snapper (L. campechanus)* is a type of marine fish that is included in the bottom sea fish family with habitat or residence on the bottom of coral or coral reefs in groups. There are several types of snapper that are often found in Indonesian waters, such as red snapper, lamb snapper, cubera snapper and etc.

# FRESH SPANISH MACAREL FISH

*Indonesia's macarel (Scomberomorus) elongated body, flattened quite strongly on the sides, bare no scales except on the lateral line (consolet plane is not clear). The snout is pointed, with a wide mouth and sharp, strong teeth in the upper and lower jaws. The snout length is shorter than the rest of the back of the head.*

# FRESH HAIRTAIL FISH

Hairtail (*Trichiurus lepturus*) is a marine fish that is easily recognized by its long and slender shape. This fish is distributed in tropical and temperate waters. The species found in the Pacific Ocean and Atlantic Ocean are known to constitute distinct populations.

# FRESH BARAMUNDI FISH

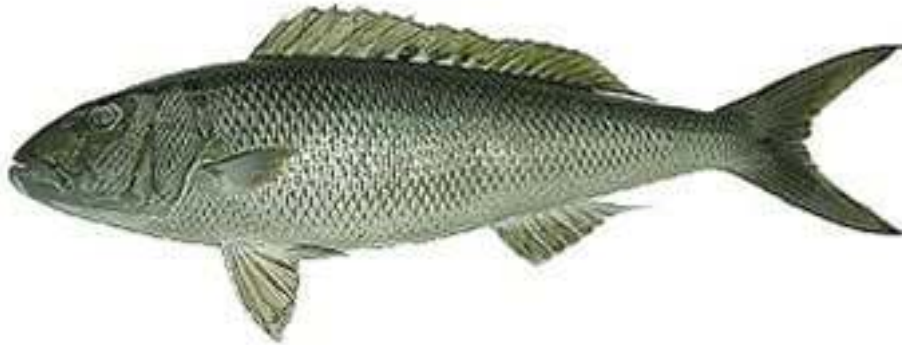

Barramundi fish (*Lates calcarifer*) or better known as white snapper is one type of fish whose population is widely spread in Southeast Asian countries to Australia. Barramundi fish have a fairly large size with an elongated body shape and a large but slightly convex mouth.

# FRESH GREEN JOB FISH

Green keris (*Aprion virescens*) is a type of medium depth water fish commonly found in Indo-Pacific waters. This fish belongs to the snapper family and is the only representative of the Aprion clan.

# FRESH SWORDFISH

Swordfish (*Xiphias gladius*) is a type of marine fish whose upper jaw and snout are elongated in the shape of a flat and strong sword, measuring almost one-third the length of the fish's body. The long rounded swordfish body can reach 2 - 4.6 m and can weigh up to 650 kg

# FRESH GOLDBAND SNAPPER

Goldband Snapper are a prized food fish, caught commercially. Goldband Snapper is the most commonly caught in the Java Sea, around Sulawesi island mostly in West and South Sulawesi.

# FRESH PARROT FISH

Parrotfish (*Scaridae*) are a large group of marine fish species that inhabit tropical and subtropical shallow waters around the world, especially on coral reefs, coral beaches and seagrass beds, and play an important role in the greatest species abundance found in Indo-Pacific waters.

# FRESH RED EMPEROR

The elephant snapper (*Lutjanus sebae*) is a type of snapper native to the Indian and western Pacific Oceans. This fish is an inhabitant of coral reefs and rocks, where this fish prefers to live in flat areas with sand or gravel substrate. This fish can be found at a depth of 5–180 meters.

# FRESH THREADFIN BREAM

Threadfin bream (*Nemipteridae*) is a family of fish in the order Perciformes. They are known as threadfin breams, whiptail breams and false snapper. They are found in the tropical waters of the Indian and western Pacific Oceans.

# FRESH MAHI - MAHI

Lemadang fish (*Coryphaena hippurus*) is a type of fish that lives in Indonesian waters and is one of the commodities from Indonesian waters. This Lemadang is a fairly large fish with a size of about 30 cm when young and 200 cm as an adult.

# FRESH EMPEROR

Lencam fish (*Lethrinidae*) are marine fish belonging to the Lethrinidae family known as emperor fish. This fish is a group of fish targeted by fishermen who are used as consumption fish.
